Home / Parkway North High School: St. Louis, MO

PROJECT DESCRIPTION

Client: Parkway North High School

Project: HVAC renovations and upgrades

General Contractor: ICS Construction Services

PROJECT APPROACH

Plan/Spec

ROLE

Installing HVAC contractor

PROJECT SCOPE

HVAC renovations and upgrades were part of a \$13 million program for improvements at Parkway North High School in St. Louis.

The project included demolition and installation of new energy efficient HVAC equipment, and recommissioning of existing chillers and boilers. Two new chillers and a new rooftop unit with an energy recovery wheel were installed. Modifications were also made to the existing air duct system and new viable air volume (VAV) boxes and sound attenuators in the ductwork were installed.

Most of the work was completed while school was in session and much of the work was done in tight mechanical rooms and spaces.
